

COOROY TO CURRA BYPASS – QLD

AREA COATED: Approximately 1500m² of concrete bridges

The coating system used on this project incorporated a primer coat of E2100 water based epoxy followed by a topcoat of E8480 fluoro modified polyurethane. This coating system very effectively protects the substrate from damage by graffiti and graffiti is easily removed with V745 graffiti remover. E8480 has excellent UV resistance providing a very durable coating for the long term protection of your asset. This coating system is extensively used on many high capital cost structures throughout Australia and overseas.

WHAT DOES A FLUOROPOLYMER ANTI-GRAFFITI COATING REALLY OFFER?

- Extreme all-weather durability
- Outstanding chemical resistance
- Ultimate colour range
- High corrosion and abrasion resistance
- Optimum colour stability
- High tolerance to temperature extremes
- Available in various sheen levels
- Certified low VOC
- Easy application
